Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-25, drawn to a valve, classified in class 137, subclass 625.47.
- II. Claims 26-42, drawn to a semiconductor manufacturing apparatus and method, classified in class 438, subclass 935.

The inventions are distinct, each from the other because:

Inventions II and I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus as claimed can be used to practice another and materially different process such as switching hot and cold water between a shower and tub.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
